Wraps and Platforms – operating principles and practical issues

Assisting private clients requires a distinct set of tools

Private clients:

- may not be able to define their expectations clearly
- may be more susceptible to emotional reactions in their investment decisions
- will have different financial beliefs that determine the appropriate investment goals and investment styles
- Like a bespoke tailor recognises each person is different, Barclays Wealth focuses on recognising that each client is different

8

Attitudes to investing are multi-dimensional

“I want my banker to run my money in the same way as I run my business. I like taking risks, I don't have much time and I want access to the most advanced and innovative products and investment ideas”
– **The Entrepreneur**

“I need sophisticated cash management services, coupled with advanced insurance products. My preference is to invest in financial assets that are real and appear easy to understand, such as residential property”
– **The Professional Sports Player**

“I don't really believe in the skills of investment managers. My main objective is to preserve my inherited wealth and it is paramount that I understand what is happening with my investments”
– **The Wealth Inheritor**

9

Wraps and Platforms – operating principles and practical issues

Traditional industry risk tolerance measures

- Represents risk attitude as a single dimension
- Not behaviourally designed or statistically robust
- Often more a test of financial knowledge or numeracy than risk tolerance
- Mask true story by reducing distinct aspects to a single number

Example: Two Different Individuals

	Client 1	Client 2
Psychological Risk Tolerance		
Investment Horizon		
Profiling Output		

10

The result is behavioural profiling considerably beyond the industry standard

Traditional One-Dimensional Approach

Risk Tolerance Questionnaire

Barclays Wealth Behavioural Approach

Financial Personality Discovery

You are not one-dimensional, all aspects of your personality matter

11

2

Wraps and Platforms – operating principles and practical issues

Financial objectives are a mix of financial psychology, investment objectives and risk capacity

Financial Personality

- Risk Tolerance
- Composure
- Market Engagement
- Perceived Financial Expertise
- Delegation
- Belief in Skill

Investment Objectives

- Time Horizon Profile
- Income Requirements
- Liquidity Profile
- Personal Inflation Rate
- Tax Optimisation

Risk Capacity

- Total Wealth
- Proportion of Wealth Under Consideration
- Stability of Existing Asset Portfolio
- Years of Future Earnings
- Stability of Future Earnings

12

Tailoring the investment journey

13

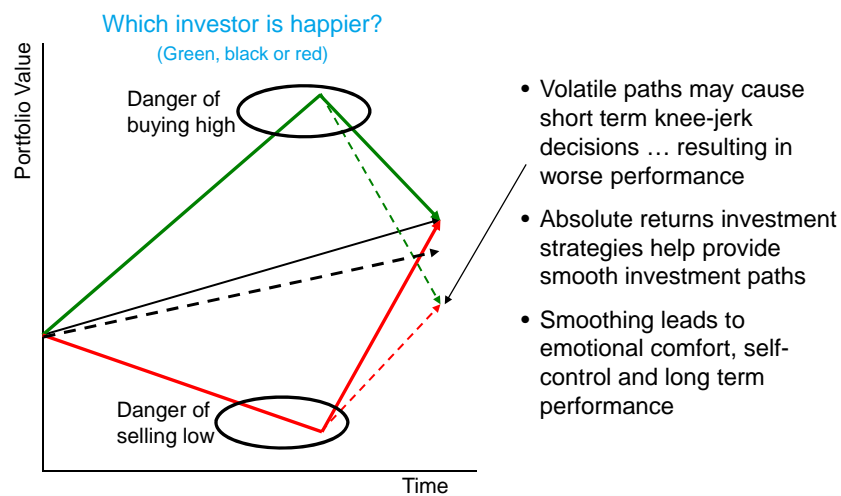

Wraps and Platforms – operating principles and practical issues

Mapping the highest return, risk-appropriate portfolio

14

The emotional experience with the investment journey has potentially greater influence on the final result

15

Wraps and Platforms – operating principles and practical issues

Mental accounting matters – cash in gains, ride losses

Situation A

- A month ago you bought a stock which you believed was undervalued by 30%. Today it is **up** 20% from that point. Nothing has changed your estimate of its fair market price, so you now believe its fair market price is undervalued by 10%.
- How likely are you to sell?

Very Likely: 34%

Situation B

- A month ago you bought a stock which you believed was undervalued by 30%. Today it is **down** 20% from that point. You now believe its fair market price is undervalued by 10%.
- How likely are you to sell?

Very Likely: 5%
